KNOW MORE. ACT FASTER.

## THE RETAIL INDUSTRY

From source to shelf.

Automotive

Discrete Manufacturing

Fashion

Food and Beverage

Non-food products

Pharma

Processes and Chemicals

Retail

Utilities

Wholesale

In the Retail Industry SAP has a dedicated SAP industry solution supporting the complete value chain of a classic Retailer from purchasing down to the store business. It contains respective Retail specific processes such as Merchandise Planning, Assortment Planning, Retail Price and Promotion Management, Store Operations and Warehouse Management.

### Every Angle's ability to deliver value to the Retail Industry

Every Angle has developed a Retail version matching the SAP Retail application. Business users are able to have better insight in more input fields pertaining to generic and variant articles, reference articles and delivery statuses. This more detailed overview of the supply chain shows clear relations between purchasing on vendor, DC and store level and gives a better understanding of daily deliveries and available stock on Retail level. Dealing with the equally massive amount of data and the complex purchasing process, Every Angle provides Retailers with the important information, on site level, to get control over daily operations.

#### Every Angle is able to map to:

- ✓ The SAP Retail specific master data;
- ✓ The SAP Retail logic and its respective processes such as store replenishment or open-to-buy;
- ✓ Stock analyses: excess stocks, out-of-stocks and obsolete stock;

- ✓ Planning analyses (priorities based on out-of-stock and contract/purchase orders for inactive articles);
- ✓ Supplier reliability and service level analyses;
- ✓ Easier and faster access to SAP data;
- ✓ More transparency and visibility in the SAP data structure;
- ✓ Better bottleneck detection in the supply chain;
- ✓ Ready-made calculations to create smart analyses.

### Results

Our SAP Retail customers report a quick ROI by:

- ✓ Reduction of returns;
- ✓ Improving service levels i.e. by getting transparency on open orders;
- ✓ Lowering transportation costs;
- ✓ Better managing forecasts;
- ✓ Improving master data quality;
- ✓ Saving IT costs associated with creating operational reports.
