

KNOW MORE. ACT FASTER.

EMPOWERING P2P ANALYTICS FOR SAP®

PROCUREMENT

Understand demand. Control inventory. Improve supply...

"Is invalid or incomplete master data causing errors and delays?"

"Which purchase orders are critical and which ones can we delay or cancel?"

"What capacity do we need at our suppliers moving forward?"

"Which invoices have been created without a purchase order?"

"Who are our worst performing suppliers (internal and external)?"

"Can we reduce inventory by returning stock - without impacting service?"

...release the potential of your procurement team!

EA4P2P: RIGHT PRODUCTS. RIGHT TIME. RIGHT PRICE.

MANAGING SUPPLIERS CAN BE A TOUGH BUSINESS.

Continually negotiating prices, constantly dealing with delivery performance issues, being criticized for holding too much of what you don't need - or not enough of what you do. Late orders, quality issues, purchase price variances – all these are things that procurement needs to keep a handle on.

Imagine if you had the ability to truly understand what your forthcoming procurement needs, based on your demand. The ability to report on supplier performance – not just at a holistic level, but right down at line item level. The ability to know whether a purchase order is critical to customer service, simply building stock or completely surplus to requirements – just in a few clicks.

The ability to know whether buyers are following process, whether suppliers are being paid on time, whether contracts are being adhered to and whether goods are arriving when they should.

Imagine your team having the capability to build a supplier performance dashboard in mere minutes, with an overview of their delivery reliability, purchase price variances, lead times and number of quality defects – all on the same overview. Imagine having the ability to effortlessly drilldown and identify the root cause of any issues, highlight potential over or under-stocks and see the purchase orders causing this. Imagine having the ability to see which sales orders will fail if that component isn't delivered on time.

Imagine no more. With Every Angle's Procure-to-Pay functionality this power is in the hands of your users.
