SAP Functional Health Check

SAP® Certified
Powered by SAP NetWeaver®

SAP® Certified
Integration with Applications on SAP HANA®

When SAP is implemented and has been used for a while, you will notice over time that the expectations of SAP benefits are not being met. The benefits of all data being integrated into one system are being jeopardized by incorrectly maintained master data as well as transaction data that have not been cleaned up.

This causes a negative impact on the planning and efficiency in the daily execution of your business processes. Users will start looking for workarounds, download data for processing outside of SAP and this situation will escalate rapidly. They need Every Angle to perform an SAP functional health check to get the full benefits of running SAP ERP again.

Objective

When Every Angle performs an SAP functional health check, it will show you how the SAP system is being used functionally, what the quality of the (master and transaction) data is and whether the operational processes are effective and efficient.

Scope

The SAP functional health check with Every Angle has a focus on the following business processes:

- Procure to Pay
- Order to Cash
- Plant Maintenance
- Manufacturing
- Inventory Management
- Master Data Management
- Finance to Report
- HCM.

A detailed analysis for each process can be done on any desired organizational level.

Benefits for the business, IT department and management

Direct benefits are data transparency and analyses based on facts:

- The execution of the operational processes (bottlenecks, pollution and backlogs)
- A detailed overview of exceptions regarding SAP data and processes
- A root cause analysis: why are these problems occurring?
- An impact analysis: what is the effect?

The SAP functional health check performed by Every Angle does not stop at problem identification; Every Angle pinpoints potential improvement actions in both data quality and business processes. In most cases, Every Angle can help to turn this improvement into business value using fact-based details directly derived from your SAP ERP data.

Activities and planning

Phase 1: Analysis of data based on interviews with the business process experts.
Phase 2: Delivery of the results in a management workshop.

Deliverables

Analysis of Supply Chain Processes
During the SAP functional health check, Every Angle will analyze the operational business processes in detail, by analyzing all documents that are created and processed in SAP in the different SAP ERP modules and how these affect the supply chain.

Analysis of Master Data

Every Angle will conduct an analysis regarding the master data quality and focus on:

✔ Customer master data

✔ Vendor master data

✔ Material master data

✔ Info records and source lists

✔ Bills of material

✔ Technical objects such as; equipment, serial numbers and functional locations

✔ Data quality checks on correctness, completeness and consistency.

Analysis of Inventory

Every Angle performs an SAP functional health check regarding the current stock, both in quantity and in value, taking into account:

✔ Product life cycle, i.e. material status, deletion flag and planning status

✔ Availability, i.e. blocked and inspection stock

✔ Batch information, i.e. expiration, shelf life and batch classification

✔ Historical consumption

✔ Planning consumption, based on all requirements in SAP, including forecast and safety stock

✔ Analysis of undesired material movements, i.e. scrapping and corrections.

Every Angle will analyze the allocation of open purchase orders, planned orders, process orders and production orders, based on current stock and planned requirements. Furthermore, Every Angle will detect potentially "over planned" orders that can cause future excess stock, as well as "under planned" orders that could result in stock shortages, last minute rescheduling and missed customer shipments. An entire variety of bottlenecks can be detected and subsequently, action lists can be created.

Every Angle
Cross-process Self-service
Analytics for SAP®

Every Angle's self-service, cross-process analytical capability empowers organizations with new levels of actionable insight - enabling them to **'know more and act faster'.** Every Angle provides real **understanding** of what is actually going on across the business (and why), enabling people to act early enough to **control** performance and drive significant financial **improvements.**
