

SERVICE OFFERING

Spare Parts Optimizer

SAP® Certified
 Powered by SAP NetWeaver®

SAP® Certified
 Integration with Applications on SAP HANA®

In the service and maintenance business you are responsible for the uptime of your (customer's) equipment, therefore you need to have the right amount of spare parts at the right location. It is a constant challenge to get the best service level while having constant pressure on your working capital and logistics costs from management. A good assortment strategy and operational control is key to an optimal service level, stock value and low costs. All these are not a given when using SAP.

Every Angle and Gordian Logistic Experts offer you a Spare Parts Optimizer. The knowledge and experience of Gordian Logistic Experts in the area of spare parts management combined with the insights into SAP with the Every Angle software provide you with a quick scan and calculated improvement potential in a very short project.

Objective

The objectives of the Spare Parts Optimizer are the following:

- ✓ Insights into your current spare parts performance
- ✓ Insights into your operational performance around your spare parts provisioning
- ✓ Insights into the value of the improvement potential.

Approach

Every Angle uses the following 2 steps in conducting the Spare Parts Optimizer:

Phase 1: Kick-off, data gathering and interviews

The Spare Parts Optimizer starts with a kick off meeting explaining the objectives and further approach. The key stakeholders will be interviewed to discover your processes and current spare parts management strategy. Based on the interviews the required information will be gathered with the Every Angle software to analyze current performance, process gaps and improvement areas.

The following standard measurements will be performed:

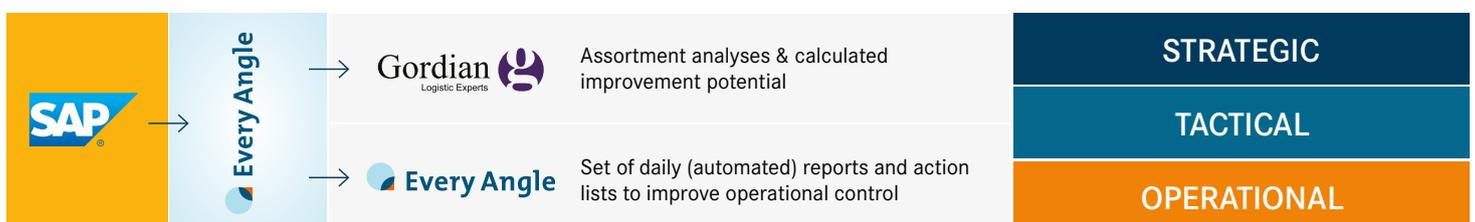

- ✓ Spare parts assortment classification based on costs and demand frequency
- ✓ Inventory value versus service levels and costs
- ✓ Current process performance including actual actionable process issues.

Phase 2: Calculate potential for improvement

After the interviews and data gathering, the consultants will analyze and benchmark the Spare Parts Management and determine your current performance levels. Areas for improvement will be identified and the improvement potential will be calculated. At the end of this phase, a management presentation will be conducted in which the results will be presented and discussed. Also the next steps for a more detailed scan, business case and implementation will be proposed. The complete project will be conducted in a few days.

Deliverables

- ✓ Current spare parts assortment performance report
- ✓ Set of operational reports which show direct actionable process issues
- ✓ Objective and expert based analysis of the maturity level of your spare parts management
- ✓ Calculated improvement potential.

CUSTOMER CASE: GASUNIE NV

At Gasunie, a major European gas infrastructure company, the Spare Part Optimizer was well received. After a couple of interviews to understand their business and processes, the potential savings in both the inventory value and operational costs were shown. Even with a lower stock value, a higher service level could be achieved. Besides the indicated savings, a couple of practical reports were created that provided direct insights into available stock in different storage locations and projects. This saved each supply chain planner immediately 0.5 – 1.0 day per week.

“ I have been involved in a lot of projects. This is one of the first that gave me direct, practical savings in a very short time. ”

MICHEL VERGEER
Supply Chain Planner

gasunie

“ I was impressed by the potential savings in stock value that we could achieve without scrapping. They showed a possible direct reduction in out of pocket cost, even with increased service levels. ”

LILIAN PRINS
Manager Supply

gasunie

Every Angle Cross-process Self-service Analytics for SAP®

Every Angle's self-service, cross-process analytical capability empowers organizations with new levels of actionable insight - enabling them to 'know more and act faster'. Every Angle provides real **understanding** of what is actually going on across the business (and why), enabling people to act early enough to **control** performance and drive significant financial **improvements**.
