EMPOWERING SCM ANALYTICS FOR SAP®

SUPPLY CHAIN

Every Angle enables supply chain teams to understand whether things are under control...

"Do we have any bottlenecks in our supply chain (and why)?"

"What material shortages are likely - and what is the impact if we don't take action?"

"Are we able to fulfill our current and future customer demand?"

"What planned orders need to be converted to prevent future stock shortages?"

"Do we have any incomplete material master data, BOM's or routings?"

"What is the difference between planned and actual demand?"

...empowering action before it impacts the customer!

EA4S2D: FROM UNDERSTANDING COMES CONTROL, FROM CONTROL - IMPROVEMENT

Improve your Supply Chain

YOU CAN'T CONTROL WHAT YOU DON'T UNDERSTAND. YOU CAN'T IMPROVE WHAT YOU ARE UNABLE TO CONTROL.

It's a simple statement, but it strikes to the heart of what Every Angle is about – and the area where this is most applicable is the supply chain. SAP has always been good at creating integrated business process, but not so good at creating insight and visibility from this integration. This is where Every Angle comes in.

Over 20 years of SAP and supply chain knowledge has been poured into developing the engine of Every Angle's integration capability – Supply and Demand Matching. This functionality is unique to Every Angle and it empowers your team with actionable insight into your supply chain. Insight that takes the form of added fields, new calculations, critical order warnings and bottleneck identifiers. Insight that they can use out-of-the-box.

Every Angle simplifies the complex nature of SAP's supply chain functionality, freeing your team from having to work through transactions like MD04 and instead providing clear cross-plant overviews and prioritized action lists. This allows your team to focus on the most important activities, freeing them from spending hours downloading data to Excel and having to manipulate it offline – and then doing it again tomorrow.

From management dashboards highlighting the performance of incoming supply, inventory, production and logistics – through to detailed action lists that help the team focus on the most important, Every Angle delivers.

 **Every Angle**

BENEFITS EA4S2D: EVERY ANGLE FOR SUPPLY TO DEMAND

- ✓ Provides new fields across the supply chain that highlight bottlenecks, critical orders, delays, shortages and data pollution – and why they exist
- ✓ Unique levels of supply chain insight and intelligence ready to use via our 'Supply and Demand Matching' logic that highlights stock, purchases and capacity you don't need
- ✓ Contains hundreds of out-of-the-box analytics specifically designed for the supply chain based on 20+ years of experience
- ✓ Allows users to analyse and report on Supply Chain process conformance as well as performance
- ✓ Highlight and resolve all master and transactional data issues affecting the supply chain
- ✓ Control inventory levels, production throughput, logistics and customer service
- ✓ Immediately drilldown from high level performance metrics straight down to the actual orders and items – taking action on insight
- ✓ Shows clearly how the Supply Chain can improve the bottom line of the business
- ✓ Focus on root cause analysis and exception management - take action before it becomes an issue
